INTERNATIONAL PRELIMINARY EXAMINATION REPORT

(PCT Article 36 and Rule 70)

Applicant's or agent's file reference 12351WO /el	FOR FURTHER ACT	TION See Notific Preliminary	cation of Transmittal of International Examination Report (Form PCT/IPEA/416)					
International application No. PCT/EP2002/008399	International filing date 26 July 2002 (2	• •	Priority date (day/month/year)					
International Patent Classification (IPC) or national classification and IPC G01N 1/28								
Applicant P.A.L.M. MICROLASER TECHNOLOGIES AG								
 This international preliminary examination report has been prepared by this International Preliminary Examining Authority and is transmitted to the applicant according to Article 36. This REPORT consists of a total of 5 sheets, including this cover sheet. 								
This report is also accompanied by ANNEXES, i.e., sheets of the description, claims and/or drawings which have been amended and are the basis for this report and/or sheets containing rectifications made before this Authority (see Rule 70.16 and Section 607 of the Administrative Instructions under the PCT).								
These annexes consist of a to	otal of 5 st	heets.						
3. This report contains indications rela	ating to the following item	ns:						
I Basis of the report								
II Priority	·							
· · ·		novelty, inventive s	tep and industrial applicability					
IV Lack of unity of in			the state of the s					
V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement								
VI Certain documents cited								
VII Certain defects in the international application								
VIII Certain observations on the international application								
Date of submission of the demand		Date of completion	of this report					
12 September 2003 (12.	.09.2003)	1	6 July 2004 (16.07.2004)					
Name and mailing address of the IPEA/EP		Authorized officer						
Facsimile No.		Telephone No.

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/EP2002/008399

I. Basis of the report								
1. With regard to the elements of the international application:*								
		the international application as originally filed						
	\boxtimes	the desc	cription:					
		pages	1-13 , as originally filed					
		pages	, filed with the demand					
		pages	, filed with the letter of					
	\square	the clai						
	لاست	pages	, as originally filed					
		pages	, as amended (together with any statement under Article 19					
		pages	, filed with the demand					
		pages	1-22 , filed with the letter of 12 February 2004 (12.02.2004)					
	\boxtimes	the drav	wings:					
	<u>K_Y</u>	pages	, as originally filed					
		pages	, filed with the demand					
		pages	, filed with the letter of					
	\Box	the cease	ence listing part of the description:					
	ا لـــا	pages	, as originally filed					
		pages	, as originary med , as originary med , filed with the demand					
		pages	, filed with the letter of					
	With regard to the language, all the elements marked above were available or furnished to this Authority in the language in which the international application was filed, unless otherwise indicated under this item. These elements were available or furnished to this Authority in the following language which is: the language of a translation furnished for the purposes of international search (under Rule 23.1(b)). the language of publication of the international application (under Rule 48.3(b)). the language of the translation furnished for the purposes of international preliminary examination (under Rule 55.2 and/or 55.3). With regard to any nucleotide and/or amino acid sequence disclosed in the international application, the international preliminary examination was carried out on the basis of the sequence listing: contained in the international application in written form. filed together with the international application in computer readable form. furnished subsequently to this Authority in written form. furnished subsequently to this Authority in computer readable form. The statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished. The statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished.							
	Replie to the and	This rebeyond lacement his report 70.17).	the description, pages the claims, Nos the drawings, sheets/fig sport has been established as if (some of) the amendments had not been made, since they have been considered to go I the disclosure as filed, as indicated in the Supplemental Box (Rule 70.2(c)).** sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to the as "originally filed" and are not annexed to this report since they do not contain amendments (Rule 70.16) then the sheet containing such amendments must be referred to under item 1 and annexed to this report.

v.	Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement						
1.	Statement						
	Novelty (N)	Claims	1-22	YES			
		Claims		NO			
	Inventive step (IS)	Claims	1-22	YES			
		Claims		NO			
	Industrial applicability (IA)	Claims	1-22	YES			

Claims

2. Citations and explanations

- 1. WO-A-00/66994 (document D1) discloses (see, for example, figure 10c and the accompanying text) an arrangement comprising a substrate or specimen slide and a specimen of biological material mounted on the substrate. A transparent film (e.g. barrier coating 100) is applied to the surface of the biological material to smooth out surface unevenness and to enhance the characteristics which are to be examined under a microscope (D1 states that visualization of the biological material is improved).
- 2. Taking D1 as a starting point, the problem addressed by the present invention is that of providing a method for preparing biological material for examination under a microscope, and an arrangement comprising a substrate and a specimen of biological material mounted on the substrate and prepared in the manner described, with a view to ensuring not only that the biological material can be viewed and examined with optimal results using a microscope, but also, and in particular, that the biological material thus prepared can be used in laser microdissection systems, in which individual biological samples are cut out of a biological material specimen by laser irradiation and catapulted from a suitable

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No. PCT/EP 02/08399

specimen slide into a receiving container by a laser shot or laser burst. The biological samples captured in the receiving container can then be examined under a microscope.

- 4. The problem is solved by applying a film to the surface of the biological material before using the LPC process in a laser microdissection system. The film is composed of a laser light-absorbing material so that the laser light emitted by the laser is absorbed completely. The applied film and the part of the sample which it covers can therefore be cut efficiently by the laser and catapulted from the specimen slide into a receiving container.
- 3. The full combination of features of independent claims 1 and 21 is neither known from nor suggested by the documents cited in the search report. These claims therefore meet the requirements of PCT Article 33(2) and (3). The same applies to dependent claims 2 to 20 and 22.
